## **Executive Summary**

The recent system updates encompassed a range of improvements aimed at refining both the functionality and user interface over the course of the semester

### **1. Product Page Changes:**

- a. Consolidated console and video game product entries into a unified form.
- b. Enabled users to specify a Null value when adding a single product to the database.

### **2. CRUD Functionality Improvements:**

- a. Resolved issues causing server crashes when a single apostrophe was added to an input value. Changes to app.js and entity views by replacing single quotes with double quotes in SELECT parameters to prevent unwanted crashes

### **3. User Interface:**

- a. Introduced a confirmation window for delete buttons to prevent accidental item deletion.
- b. Added "toggle" feature to allow a user to toggle / un-toggle the edit button if selected again
- c. Fixed Date display by only showing date and not datetime
- d. Implemented dynamic dropdowns for improved selection processes for consoleID and productID.
- e. Addressed a "required" attribute issue for dates if a user attempted to edit/update to prevent date resetting to 0.
- f. Modified price attributes to decimal (6,2) to accommodate price values > \$1000
- g. Made cosmetic UI changes and added alerts to notify users of data updates or deletions.

### **4. User-Friendly Attributes and IDs:**

- a. Recommended placeholders for customer information, e.g., "telephone," to specify phone number style format
- b. Set IDs as read-only during the edit option to maintain consistency.
- c. Ensured consistency between camelCase and snake case for attributes in entity tables.
- d. Added feature to display all items when editing an item in an entity page

These updates were iterated over the course of the semester and we have made consistent changes throughout the semester in order to employ a better overall user experience and functioning database system for GamerStop.

## Project Outline and Database Outline, ERD Schema & Sample Data Updated Version

GamerStop is a family owned, brick and mortar retail shop that focuses on selling video games to its customers. On average, they sell about 150 video games a month and are having a difficult time keeping track of their general inventory and sales records. Their primary products include consoles from the 3 main manufacturers including: Macrosoft, Phony, and Mintendo, plus 1000's of video games that work for those consoles.

The owner is having a hard time keeping track of all the sales, customers, and inventory that are currently in the storefront and is looking for a database system to manage all of this. The company would like to keep track of the following: ***Customers, Invoices, Products, Consoles, Video\_games.***

### Database Outline, in Words

- 1) **Customers:** records details of the customers who shop at Gamerstop
  - **customerID:** int, auto- increment, unique, not NULL, PK
  - **email:** varchar(50), not NULL
  - **firstName:** varchar(50), not NULL
  - **lastName:** varchar(50), not NULL
  - **phone:** decimal(10), not NULL
    - **Relationship:** 1:M relationship between customer and invoices is implemented with customerID as FK in invoices.
- 2) **Invoices:** keeps a record of the customer orders
  - **invoiceID:** int, auto-increment, unique, not NULL, PK
  - **customerID:** int, FK reference Customers(customerID)
  - **orderDate:** datetime, not NULL
  - **totalPrice:** decimal(6,2), not NULL
    - **Relationship:** M:N relationship between invoice and product & M:1 between invoice and customer, with customer as FK in invoice
- 3) **Invoices\_has\_Products:** intersection table (lookup table) to reflect M:N relationship between Invoices and Products. Prevents redundancy for M:N relationship between Invoices and Products
  - **invoiceProductID:** int(255) PK, not NULL

- **invoiceID:** int(255) FK reference Invoices(invoiceID)
- **productID:** int(255) FK reference Products(productID)

4) **Products:** Record the details of each product

- **productID:** int, auto-increment, unique, not NULL, PK
- **price:** decimal(6,2), not NULL
- **consoleID:** int(25): foreign key reference to Console Table with consoleID
- **videogameID:** int(3000): foreign key reference to Video\_Games table with videoGameID
- **Relationship:**
  - M:N relationship with the invoice. There can be multiple products that can be associated with different invoices, and the same product can be purchased by different invoices. 1:M relationship between product and video game. 1:M relationship between product and console.

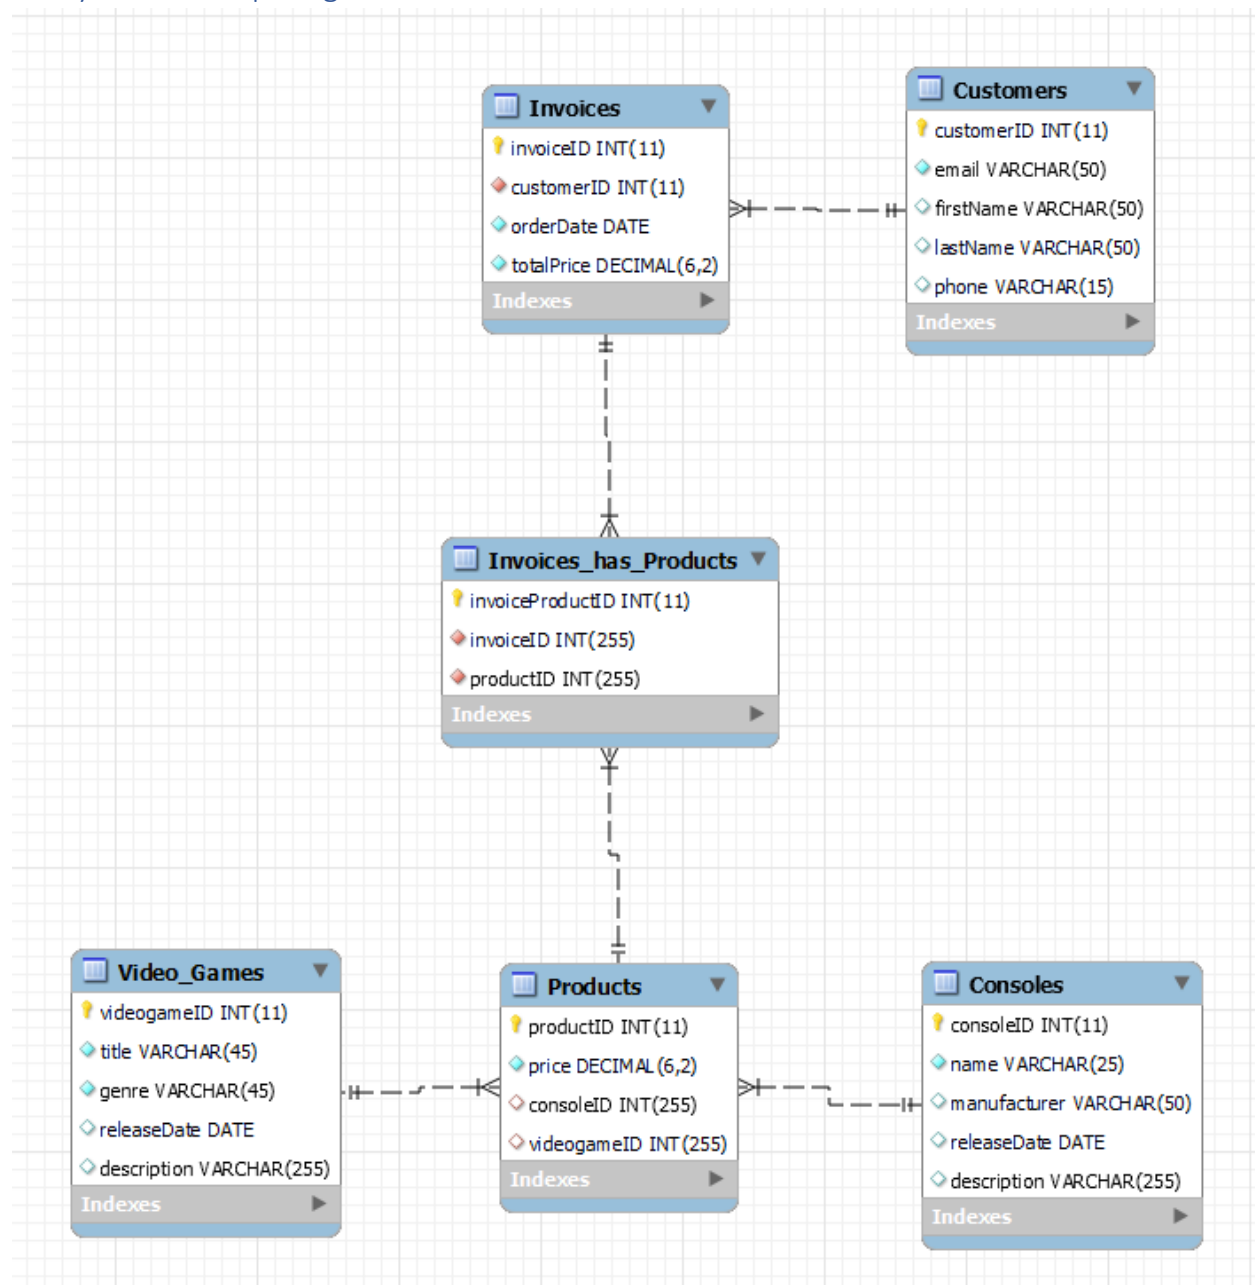

D. **Video\_Games:** keeps track of all the current video game inventory for GamerStop.

- **videogameID:** int, auto-increment, unique, not NULL, PK
- **title:** varchar (50), not NULL
- **genre:** varchar(50), not NULL
- **releaseDate:** date, not NULL
- **description:** varchar (255). Describes the basics of the product
  - **Relationship:** 1:M relationship between video\_game and product

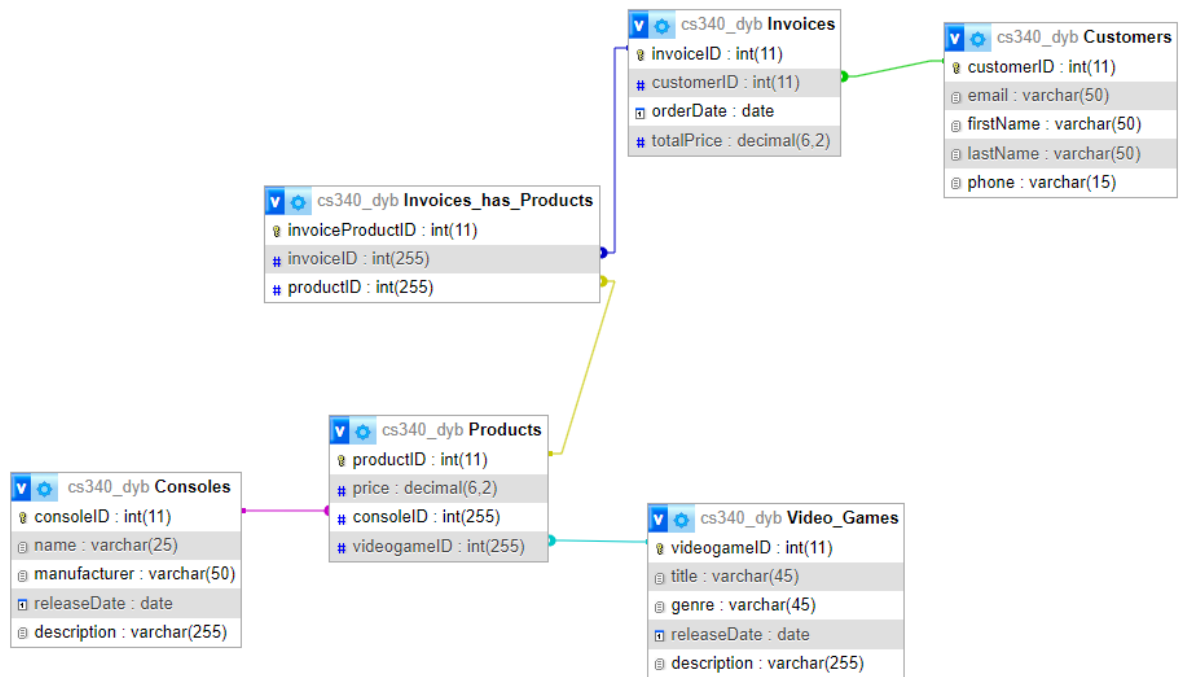

E. **Consoles:** keeps track of all the game consoles inventory for GamerStop. Will include manufacturers that have produced various generational models of their consoles

- **consoleID:** int, ai, unique, not NULL, PK
- **name:** varchar(15) not NULL
- **manufacturer :** varchar (50) not NULL
- **releaseDate:** date not NULL
- **description:** varchar (255) not NULL. Describes the basics of the product
  - **Relationship:** 1:M relationship between console and product

## Entity Relationship Diagram

## Schema

## Example Data

### Customers:

customerID	email	firstName	lastName	phone
1	abc@gmail.com	Gordon	Wilcox	620-977-1538
2	wxy@outlook.com	Samson	Barton	661-335-1004
3	gg@oregonstate.edu	Kade	Oneal	360-503-2238

### Invoices:

invoiceID	customerID	orderDate	totalPrice
1	2	2023-07-26 00:00:00	129.99
2	3	2023-09-08 00:00:00	44.59
3	1	2023-10-01 00:00:00	599.98

### Invoices\_has\_Products:

invoiceProductID	invoiceID	productID
1	1	1
2	2	3
3	3	2
4	3	4

### Products:

productID	price	consoleID	videogameID
1	129.99	1	NULL
2	549.99	2	NULL
3	44.59	NULL	1
4	50.49	NULL	2
5	199.99	3	NULL
6	23.99	NULL	3

### Video\_Games:
